End User License Agreement (EULA)

By installing and using Terabox Complete API, you agree to the open-source MIT License terms. Software provided by **VinayakGhai (Indie Dev)** as-is without warranty. Credentials are stored locally in your environment file, and session tokens are resolved securely on Cloudflare edge proxies.

Getting Started & Basic Usage

Terabox Complete API allows instant background uploads to your TeraBox cloud storage directly from your shell terminal with zero window manager popups.

Command	Description	Execution Mode
store <file> [folder]	Upload a single file to TeraBox	Instant Background (<3ms)
store --sync <file>	Upload file in foreground with progress bar	Foreground Terminal
store_dir <folder>	Upload entire directory recursively	Instant Background
store_check	Check worker proxy & session status	Health Check
store_log	View complete upload history log	History Viewer
store_clear	Clear upload history log entries	Log Manager
store -h	Interactive terminal help & navigation	Help Navigation

Terminal Navigation & Interactive Help

Whenever you run store without arguments or type store -h, the CLI launches an interactive terminal menu displaying active sessions, quick command shortcuts, log inspection, and troubleshooting hints.

Platform Specific Features

Windows: Setup installer automatically registers environment PATH variables and opens this *LEARN IT* guide upon completion.

Linux: Ships as standalone tarball / package with native notify-send toast notifications that auto-dismiss in 2 seconds upon upload completion.
