Terabox Complete API & CLI Uploader Manual — VinayakGhai (Indie Dev)

1. ONE-LINE INSTALLATION (LINUX / AUR)

To install Terabox Complete API on any Linux system, simply run: **yay -S teraapi-full** or install globally via Node package manager using: **npm install -g @vinayakghai/terabox-complete-api**.

The Terabox Complete API is engineered for ultra-fast, non-intrusive command line uploads. Unlike legacy web automation tools, it uses a Cloudflare Worker edge proxy with zero GUI windows, achieving 3ms prompt returns via background detachment.

2. REVAMPED CLI SYNTAX REFERENCE (stt / storetera)

Command Syntax	Short Alias	Description & Execution Mode
storetera upload <file>	stt <file>	Upload file instantly (Background Detached <3ms)
storetera upload --sync	stt upload --sync	Upload file in foreground with live progress bar
storetera dir <folder>	stt dir <folder>	Upload entire directory recursively
storetera track	stt track	View live color background process progress bars
storetera delete <path>	stt delete <path>	Purge remote file or directory on cloud storage
storetera list [folder]	stt list [folder]	List all remote files in TeraBox storage
storetera check	stt check	Verify Worker proxy & account session health
storetera log	stt log	View formatted upload history log
storetera clear	stt log clear / stt clear	Clear local upload history & tracking cache
storetera help	stt help / stt -h	Display interactive terminal help menu
